

Human Well-Being Research and Policy Making

Series Editor

M. Joseph Sirgy, Department of Marketing
Virginia Polytechnic Institute & State University
Blacksburg, USA

This series includes policy-focused books on the role of the public and private sectors in advancing quality of life and well-being. It creates a dialogue between well-being scholars and public policy makers. Well-being theory, research and practice are essentially interdisciplinary in nature and embrace contributions from all disciplines within the social sciences. With the exception of leading economists, the policy relevant contributions of social scientists are widely scattered and lack the coherence and integration needed to more effectively inform the actions of policy makers. Contributions in the series focus on one or more of the following four aspects of well-being and public policy:

- Discussions of the public policy and well-being focused on particular nations and worldwide regions.
- Discussions of the public policy and well-being in specialized sectors of policy making such as health, education, work, social welfare, housing, transportation, use of leisure time.
- Discussions of public policy and well-being associated with particular population groups such as women, children and youth, the aged, persons with disabilities and vulnerable populations.
- Special topics in well-being and public policy such as technology and well-being, terrorism and well-being, infrastructure and well-being.

This series was initiated, in part, through funds provided by the Halloran Philanthropies of West Conshohocken, Pennsylvania, USA. The commitment of the Halloran Philanthropies is to “inspire, innovate and accelerate sustainable social interventions that promote human well-being.” The series editors and Springer acknowledge Harry Halloran, Tony Carr and Audrey Selian for their contributions in helping to make the series a reality.

	Busisiwe Nkala-Dlamini, Zintle Ntshongwana, and Roshini Pillay	
6	Designing Healthier Cities: A Pilot Program in the Architectural Design Studio	95
	Stéphane Sadoux and Cecilia Di Marco	

Part III Health and Well-being in the Workplace

**7 Embedding the Arts into Healthcare Settings:
Create+—An Arts Referral Program for NHS Staff 115**
Kim Wiltshire and Dawn Prescott

**8 Women’s Well-being in the Workplace Across the Lifespan:
Comparative Perspectives on Menopause Workplace Policy
and Practices in the United Kingdom, France,
and the United States 139**
Louise Dalingwater, Liana B. Winett, and Laurence Peru-Pirotte

**9 Cross-Border Workers’ Well-being on the Island of Ireland:
A Blind Spot of Cross-Border Cooperation? 169**
Vanessa Boullet and Julien Guillaumond

About the Editors

Louise Dalingwater is full professor of British politics and health policy at Sorbonne Université. Her current research focuses on health policy, healthcare delivery and well-being in the United Kingdom, with comparative research on European health systems and global health policy research. Recent publications include a book on the UK service economy, a monograph on the NHS and several book chapters and articles on well-being and health. She has also co-edited several publications on well-being in Europe (*The Unequal Costs of Covid-19 on Well-being in Europe*, Springer International Publishing AG (2022) and Well-being in an Educational Setting, *International Journal of Health, Wellness and Society* (2024)). She is Principal Investigator (PI) for the *Digital Health Systems* IITD Delhi-Sorbonne Multi-Institutional Faculty Interdisciplinary Research Project, a member of the steering group for the 4EU+ global outreach project Meta-UN and Chair of the Health Wellness and Society research network based in Illinois, United States.

Arnaud Page is Associate Professor of British History at Sorbonne University. His work lies at the crossroads of environmental history, food history, and the history of medicine. Recent publications include work on the history of flour bleaching in the United Kingdom (*Technology and Culture*, 2023) and on the history of nutrition science in Great Britain and the British Empire (*Journal of British Studies*, 2025). His research primarily explores the history of nutrition—plant, animal, and human—with a particular emphasis on quantification and indicators. He is currently completing a monograph that traces the contested emergence of quantitative approaches to nutrition, with a particular focus on the history of nitrogen in Britain and its Empire between 1840 and 1914.

Liana B. Winett is Associate Professor in the Oregon Health & Science University-Portland State University School of Public Health. She researches how communities and societies discuss potential solutions to the complex and controversial problems that affect the public's health and well-being, and how framing of these problems can support broad participation in these important debates. She has explored discourse surrounding US federal school foods policy; child healthy food

access; early childhood care and education; gun violence prevention; the developmental origins of health and disease (DOHaD); breast, cervical, and prostate cancers; the US public health response to bioterrorism; state responses to COVID-19; and policy related to menopause and menstruation. In 2022–2023, she was an invited researcher at le Centre d’Études Politiques et Sociales (CEPEL), Faculté de Droit et de Sciences Politiques, l’Université de Montpellier.
